

The First Israeli Modelling Week

July 2-6, 2017

Carlton Hotel, Nahariya, Israel

Mathematicians and Engineers, Ph.D. students, postdocs, and early-career researchers, whether working in industry or members of the academic community, are invited to take part in the forthcoming First Israeli Modelling Week, which is organized by the Galilee Research Center for Applied Mathematics of ORT Braude Academic College with collaboration of the Mathematics for Industry Network (MI-NET), a European-funded network.

During this week, students and researchers from Israel and from around Europe will work together on modelling and solving real industrial problems in fields such as Engineering, Materials Science, Optimization of processes, Bio-medicine and more!

Participants will gain experience in mathematical modelling and enhance their collaborative and communication skills. The workshop also aims at contributing to dialogue and technology transfer between different areas of application and to increase public awareness of the applications of Mathematics to Industry.
